SIMULATION OF WAVEFRONT SHAPING ALGORITHMS

Contact Phone

Abstract

The idea of wave front manipulation using wave front shaping is simple. However, focusing algorithms are not fully investigated yet and new more efficient and sophisticated approaches are invented every year. This paper focuses on development of a tool which allows investigating and comparing different algorithms and presentation of a new light focusing algorithm based on maximum length sequences (MLS).

Type of Book of Abstracts

Primary authors: Mr DANKO, Oleksandr (National Taras Shevchenko Univ. of Kyiv); Dr KOVALENKO, Andrey (National Taras Shevchenko Univ. of Kyiv); Dr DANKO, Volodymyr (Taras Shevchenko National University of Kyiv)

Presenter: Mr DANKO, Oleksandr (National Taras Shevchenko Univ. of Kyiv)

Session Classification: Laser Physics and Optoelectronics

Track Classification: Laser Physics and Optoelectronics
