

EFFECTS OF HETEROVALENT DOPING ON MORPHOLOGY AND STRUCTURAL PROPERTIES OF THE $\text{La}_{1-x}\text{Eu}_y\text{VO}_4$ NANOPARTICLES

Contact Phone

Abstract

Structural, chemical and morphological characteristics of luminescent active $\text{La}_{1-x-y}\text{Eu}_y\text{Ca}_x\text{VO}_4$ sol-gel nanoparticles are studied. Incorporation of Ca^{2+} cations in the REVO_4 crystal lattice is confirmed. Changes of the samples' compositions are found to be accompanied by changes of sizes and morphology of nanoparticles.

Type of Book of Abstracts

Primary authors: Ms SLEPETS, Alina (Taras Shevchenko Kyiv National University); Dr CHUKOVA, Oksana (Taras Shevchenko Kyiv National University); Prof. NEDILKO, Sergii A. (Taras Shevchenko Kyiv National University); Prof. NEDILKO, Sergii G. (Taras Shevchenko Kyiv National University); Dr VOITENKO, Tetiana (Taras Shevchenko Kyiv National University)

Presenter: Ms SLEPETS, Alina (Taras Shevchenko Kyiv National University)

Session Classification: Laser Physics and Optoelectronics

Track Classification: Laser Physics and Optoelectronics
