

LASER ABSORPTION SPECTROSCOPY OF THERMAL PLASMA WITH COPPER VAPORS

Contact Phone

Abstract

The plasma of electric arc discharge between two types of electrodes Cu-C and Cu-Cr was investigated. Determination of radial temperature distribution was carried by optical emission spectroscopy. The radial distribution of copper atoms in plasma was obtained by laser absorption spectroscopy.

Type of Book of Abstracts

Primary author: Mr MURMANTSEV, Aleksandr (Taras Shevchenko National University of Kyiv)

Co-authors: Prof. VEKLICH, Anatoly (Taras Shevchenko National University of Kyiv); Mr KLESHYCH, Mykhailo (Taras Shevchenko National University of Kyiv); Mr FESENKO, Sergiy (Taras Shevchenko National University of Kyiv); Dr BORETSKIJ, Vyacheslav (Taras Shevchenko National University of Kyiv)

Presenter: Mr MURMANTSEV, Aleksandr (Taras Shevchenko National University of Kyiv)

Session Classification: Plasma Physics

Track Classification: Plasma Physics
