

OPTICAL NEAR-FIELD NANO-POLISHING OF THE QUARTZ SUBSTRATE SURFACE

Contact Phone

Abstract

The results of the study of optical near-field nano-polishing of the quartz substrate surface are presented. The results obtained demonstrate a sharp decrease in the level of roughness of the quartz substrate surface, which confirms the efficiency of this method. The proposed technique is highly effective in surface nanotechnology.

Type of Book of Abstracts

Primary authors: Mr KRAVCHUK, Petro (Faculty of Radio Physics, Electronics and Computer Systems, Taras Shevchenko National University of Kyiv, 64/13, Volodymyrska Str., Kyiv, Ukraine, 01601); VASYLENKO, Dmytro; Prof. GRYGORUK, Valerii; VOITENKO, Zoia (Chemical Faculty of Taras Shevchenko National University of Kyiv); PAVLENKO, Vadym (Chemical Faculty of Taras Shevchenko National University of Kyiv); KANEVSKII, Vasil (Chuiko Institute of Surface Chemistry of National Academy of Sciences of Ukraine); SERDEGA, Iryna (Faculty of Radio Physics, Electronics and Computer Systems of Taras Shevchenko National University of Kyiv)

Presenter: Mr KRAVCHUK, Petro (Faculty of Radio Physics, Electronics and Computer Systems, Taras Shevchenko National University of Kyiv, 64/13, Volodymyrska Str., Kyiv, Ukraine, 01601)

Session Classification: Surface Physics, Nano- and Microelectronics

Track Classification: Surface Physics, Nano- and Microelectronics
